DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 22, 2004 has been entered.

Specification

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: the applicant has amended the claims to recite that the composition is suitable for ingestion by a suckling infant. The claimed language is not supported by the originally filed disclosure.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 3761

Claims 1 – 71 are rejected under 35 U.S.C. 103(a) as being unpatentable over Buckley et al. (US 5,281,186), and further in view of Allen (US 6,361,806).

With respect to claim 1, Buckley et al. (hereinafter "Buckley") discloses a breast pad for absorbing fluid leaking from the breast of a woman and minimizing the soiling of clothing worn by a woman, the breast pad having a front side which faces the breast and a back side which faces the clothing, said front side comprising a composition for improving breast and nipple skin care health which is suitable for ingestion by a suckling infant as set forth in col. 3, lines 28 – 35 and figures 1 and 3.

The difference between Buckley and claim 1 is the provision that the front side comprises 0.1g/m² to about 30 g/m² of a composition comprising omega-3 fatty acids.

Allen teaches a cream comprising an omega-3 fatty acid as set forth in col. 8, lines 23 – 26.

It would have been obvious to one of ordinary skill in the art to modify the breast pad of Buckley to provide the composition taught by Allen because while Buckley discloses that lotion of any type as is commercially available to afford protection and healing to an individual's skin portion may be provided on the breast cup arrangement (col. 3, lines 26 – 35), the composition of Allen promotes improvement of the skin as set forth in col. 7, line 64 to col. 8, line 6.

Additionally, it would have been obvious to one of ordinary skill of the art modify the amount of the composition used (i.e. 0.1g/m² to about 30 g/m²) based on the size of the delivery vehicle (i.e. a large breast pad, a nipple pad, etc.) since it has been held

Art Unit: 3761

that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only a level of ordinary skill in the art.

Regarding claims 2 - 3, 21 - 22, 36 - 37, 59 and 66, Allen teaches the claimed weight percentage of the omega 3 fatty acid as set forth in col. 12, lines 1 - 4.

Regarding claims 4 – 5 and 18 – 19, Allen teaches flaxseed oil as set forth in col. 28, lines 29 – 35.

With reference to claims 6, 24 and 42, Allen teaches vitamin C as set forth in col. 10, lines 13 – 17.

Regarding claims 7-8, 25-26, 43-44, 61, 65 and 68, Allen teaches the claimed pH as set forth in col. 10, lines 31-33.

As to claims 9, 27 and 45, Allen teaches a composition comprising 40% – 60% of a solidifying agent as set forth in col. 13, line 45 to col. 14, line 11.

With reference to claims 10, 11, 28, 29, 46 and 47, Allen teaches a composition comprising 1% – 40% of a fatty alcohol in the form of a sterol as set forth in col. 13, line 45 to col. 14, line 11.

As to claims 12, 30 and 48, Allen teaches the composition further comprising an extracted botanical as set forth in col. 14, lines 61 – 65.

It would have been obvious to one of ordinary skill in the art to modify the amount of extracted botanical used in the composition in order to achieve the desired product since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable range involves only a level of ordinary skill in the art.

Art Unit: 3761

Regarding claims 13, 31 and 49, Allen teaches a composition comprising .01% – 10% of an emollient as set forth in col. 12, lines 1 – 3.

As to claims 14, 32 and 50, Allen teaches a composition comprising a viscosity enhancer as set forth in col. 10, lines 2-7.

It would have been obvious to one of ordinary skill in the art to modify the amount of viscosity enhancer used in the composition in order to achieve the desired product since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable range involves only a level of ordinary skill in the art.

Regarding claims 15, 33 and 51, Allen teaches a composition comprising a rheology enhancer a set forth in col. 15, lines 39 – 43.

It would have been obvious to one of ordinary skill in the art to modify the amount of rheology enhancer used in the composition in order to achieve the desired product since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable range involves only a level of ordinary skill in the art.

Regarding claims 16, 34 and 52, Allen teaches a composition as a cream as set forth in col. 12, line 1.

With respect to claim 17, see the rejection of claim 1. Additionally, Allen teaches the use of an omega-6 fatty acid as set forth in col. 8, lines 19 – 22.

Regarding claim 20, Allen teaches the use of sunflower oil as set forth in col. 13, lines 55 – 60.

Art Unit: 3761

As to claims 23, 41, 57, 64 and 71, Allen teaches the ratio of omega-3 fatty acids to omega-6 fatty acids in the composition to be between 1:2 to about 2:4 as set forth in col. 19, table A.

With respect to claim 35, see the rejection of claims1 and 17. The examiner notes that linoleic acid, the omega-6 fatty acid disclosed by Allen, is considered an essential fatty acids.

With reference to claims 38 and 39, Allen teaches the claimed amount of essential fatty acids as set forth in col. 19, table A.

As to claim 40, Allen teaches the use of an omega-6 fatty acid as set forth in col. 19, table A.

With respect to claim 53, see the rejection of claims 1, 17 and 35. Additionally, Allen teaches a composition comprising from about 1% to about 15% of flaxseed oil as set forth in col. 13, lines 32 – 65.

As to claim 54, Allen teaches a composition comprising from about 1% to about 15% of flaxseed oil as set forth in col. 13, lines 32 – 65.

As to claim 55, Allen teaches a composition comprising from about 1% to about 15% of essential fatty acids as set forth in col. 13, lines 32 – 49.

With reference to claim 56, see the rejection of claims 1, 17, 35 and 53.

Additionally, Allen teaches the composition including lenoleic acid as set forth in col. 8, lines 19 – 22.

Art Unit: 3761

With reference to claim 58, see the rejection of claims 1, 17, 35 and 53. The examiner contends that the claimed method steps would have resulted from the use of the device recited in claims 1, 17, 35 and 53.

As to claims 60 and 67, Allen teaches the claimed oil as set forth in col. 13, lines 55 – 67.

With respect to claims 62, 63, 69 and 70, Allen teaches a composition further including omega-6 fatty acids (i.e., essential fatty acids) in the form of linoleic acid as set forth in col. 19, table A.

With reference to claim 65, see the rejection of claims 1, 17, 35 and 53. The examiner contends that the claimed method steps would have resulted from the use of the device recited in claims 1, 17, 35 and 53.

Response to Arguments

Applicant's arguments filed April 22, 2004 have been fully considered but they are not persuasive.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Buckley

Art Unit: 3761

discloses that lotion of any type as is commercially available to afford protection and healing to an individual's skin portion may be provided on the breast cup arrangement (col. 3, lines 26 - 35) and the composition of Allen promotes improvement of the skin as set forth in col. 7, line 64 to col. 8, line 6.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a composition that treats the outer layer of the skin, a composition that improves skin and nipple health during breast feeding or a composition that can be safely ingested by a suckling infant) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

The applicant's arguments are directed toward limitations that have not have been recited in the claims. The claimed invention is directed to a breast pad including a composition comprising omega-3 fatty acids. Buckley discloses a breast pad that may be impregnated with any commercially available lotion (col. 3, lines 31 – 35) and Allen discloses a breast treatment composition that includes omega-3 fatty acids.

The intended use of the claimed invention (i.e. topical application vs. ingestion) must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference

Art Unit: 3761

as compared to the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

Further, the examiner finds that the applicant's arguments are not commensurate with the scope of the claims. All compositions are suitable for ingestion. Whether or not the composition may be <u>safely</u> ingested is a separate argument that is not supported by the originally filed disclosure. See MPEP 21122 which states:

In order to constitute anticipatory prior art, a reference must identically disclose the claimed compound, but no utility need be disclosed by the reference. *In re Schoenwald*, 964 F.2d 1122, 22 USPQ2d 1671 (Fed.Cir. 1992)

The fact that applicant has recognized another advantage which would flow naturally from following the suggestion of the prior art cannot be the basis for patentability when the differences would otherwise be obvious. See *Ex parte Obiaya*, 227 USPQ 58, 60 (Bd. Pat. App. & Inter. 1985).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michele Kidwell whose telephone number is 703-305-2941. The examiner can normally be reached on Monday - Friday, 7:30am - 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Calvert can be reached on 703-305-1025. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
